TEACHING METHODOLOGY

- Lectures

LEARNING OBJECTIVES OF THE SUBJECT

"Photonic materials and metamaterials" aims to introduce to the chemical and physical properties of the most important material platforms in photonics. The emphasis is in studying optical and electro-optical properties which will be related with the more fundamental material characteristics such as composition, bonding, electronic structure and doping. These fundamental properties will serve to describe and understand the physics and technology of a variety of photonic and optoelectronic structures related with lasing, photovoltaics, waveguiding and non-linear optics.
