### DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

---

#### Specific:

- CE4. Demonstrate knowledge of the fundamentals of image formation, propagation of light through different media and Fourier Optics.
- CE9. Ability to synthesize and present photonics research results according to the procedures and conventions of scientific presentations in English.
- CE2. Demonstrate the understanding of the peculiarities of the quantum model for light-matter interaction.

#### General:

- CG1. Ability to project, design and implement products, processes, services and facilities in some areas of photonics, such as photonic engineering, nanophotonics, quantum optics, telecommunications and biophotonics.
- CG2. Ability to modeling, calculate, simulate, develop and implement in research and technological centers and companies, particularly in research, development and innovation tasks in all areas related to Photonics.
- CG4. Ability to understand the generalist and multidisciplinary nature of photonics, seeing its application, for example, to medicine, biology, energy, communications or industry

#### Transversal:

1. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.
2. ENTREPRENEURSHIP AND INNOVATION: Being aware of and understanding how companies are organised and the principles that govern their activity, and being able to understand employment regulations and the relationships between planning, industrial and commercial strategies, quality and profit.
3. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.
5. TEAMWORK: Being able to work in an interdisciplinary team, whether as a member or as a leader, with the aim of contributing to projects pragmatically and responsibly and making commitments in view of the resources that are available.

**Basic:**

CB6. Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context

CB7. Students should know how to apply the knowledge acquired and their problem-solving ability in new or little-known environments within broader (or multidisciplinary) contexts related to their area of study.

CB8. Students should be able to integrate knowledge and face the complexity of formulating judgments based on information that, being incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and judgment.

CB10. Students should possess the learning skills that allow them to continue studying in a way that will be largely self-directed or autonomous.

**TEACHING METHODOLOGY**

---

- Lectures
- Activity

**LEARNING OBJECTIVES OF THE SUBJECT**

---

The course on Fibers and Telecommunications provides an overview of both the fundamental physical phenomena and how different techniques have been developed to reach the nowadays huge optical communication capacity. The subject, on the one hand, revises the evolution of one of the most relevant technological achievements of photonics, as distinguished by the Noble Prize in Physics 2009 recently awarded to Charles K. Kao for his groundbreaking paper published in 1966. On the other hand, it focuses on the challenges of designing an Optical Communication System and how different photonics technologies are applied to overcome the imperfections of fibers, optical sources, amplifiers, receivers, etc.

**STUDY LOAD**

---

| Type              | Hours | Percentage |
|-------------------|-------|------------|
| Hours large group | 24,0  | 32.00      |
| Self study        | 51,0  | 68.00      |

**Total learning time:** 75 h

**CONTENTS**

---

**1. Introduction**

**Description:**

- 1.1. Evolution of Fiber Telecommunications
- 1.2. Main photonic technologies pushing the advance of transmission capacity
- 1.3. Introduction of basic elements of Fiber Telecommunication Systems

**Full-or-part-time:** 2h 30m

Theory classes: 2h 30m

## 2. Light Propagation and Signal Transmission in Fibers

### Description:

- 2.1. Review of basic concepts
- 2.2. Transmission limitations in first multimode fibers
- 2.3. Optimized Single-mode fibers
- 2.4. Chromatic dispersion limitation: Techniques for measuring and for overcoming chromatic dispersion in real systems
- 2.5. Polarization of Light in fibers: difficulties and advantages
- 2.6. Transmission limitations due to High Power: Non-Linear Effects

**Full-or-part-time:** 6h

Theory classes: 6h

## 3. Optical Transmitters and Receivers

### Description:

- 3.1. Semiconductor Lasers in Fiber Telecommunications
- 3.2. Broadband Optoelectronic Modulators
- 3.3. Coding Information on Light's properties: Modulation Formats
- 3.4. Photo-receivers: how the diverse photo-detector physical characteristics affect to the proper reception of the coded information

**Full-or-part-time:** 6h

Theory classes: 6h

## 4. Optical Amplifiers

### Description:

- 4.1. How a Quantum Transition multiplied by 10.000 the transmission capacity of fibers: EDFA
- 4.2. Tailored optical amplification: Semiconductor Optical Amplifiers
- 4.3. From a limiting non-linear effect to a flexible optical amplification technique: Raman Amplifier

**Full-or-part-time:** 4h

Theory classes: 4h

## 5. Multichannel systems and networks

### Description:

- 5.1. Your own first design of an Optical Communication System
  - 5.1.1. Wavelength Division Multiplexing (WDM) systems OR
  - 5.1.2. Time Division Multiplexing (TDM) systems: Passive Optical Networks (PON)
- 5.2. Checking your design's advantages and possible limitations

**Full-or-part-time:** 4h

Theory classes: 4h

## ACTIVITIES

---

### Visit

**Description:**

- Research center or laboratory visits or Seminar on: Telecommunication Systems and/or Biomedical Applications

**Full-or-part-time:** 2h 18m

Theory classes: 2h 18m

## GRADING SYSTEM

---

- Exam (50%)
- Team work, attending seminars, lab visits, possible oral presentation, class attendance, homework (50%)

## BIBLIOGRAPHY

---
